**ORVELLA PHARMACY MANAGEMENT SYSTEM**

**Easy Step-by-Step User Manual (Non-Technical Guide)**

Welcome to your new pharmacy system! This manual is written in plain, simple language to help you and your staff handle daily pharmacy tasks—from selling medicine to updating stock and checking your shop's performance.

---

**1. Quick Dashboard Overview**

When you first log in, you will see the **Pharmacy Operations Command Center**. This is your central view of the pharmacy's current status.

- **Today's Invoices:** Shows the total number of sales slips printed today.
- **Gross Revenue:** The total money collected today across all payment options (Cash, M-Pesa, Card).
- **Low Stock Threshold Violations:** Alerts you when a medicine is running low. For example, if the system says, **"Actal Tums | Stock: 35 / Min: 50"**, it means you only have 35 tablets left, which is lower than your safe minimum setting of 50.
- **Imminent Batch Expirations:** Warns you about medicine that will expire soon. The dashboard lists the specific batch numbers and expiration dates so you can remove or discount them before they expire.

---

**2. Daily User Roles (Who Does What?)**

To keep your pharmacy organized and secure, your staff members have different access levels:

1. **Manager / Admin:** Has full power over the system. Only the manager can add or remove employees, look at profit and loss graphs, change the shop's logo, or handle backend system tasks.
2. **Pharmacist:** Can add new medicines, check incoming shipments from suppliers, and fix stock numbers if a bottle gets broken or expires.
3. **Cashier:** Can use the sales screen, type in customer names, scan barcoded medicines, accept payments, and close out the cash drawer at the end of the day.

---

## 3. Step-by-Step Daily Tasks

### 3.1. How to Register a New Medicine

When a brand-new type of medicine arrives at your store for the first time, go to the **Inventory Console** to add it to your system catalog.

1. Look at the right side of the screen under **Register New Medication Formulation**.
2. Type in the **Brand Name** (e.g., *Panadol Extra Tabs*).
3. Choose the **Medication Form Category** from the dropdown menu (e.g., *Tablet*, *Syrup*, *Capsule*, *Cream*). As soon as you choose a category, the system will automatically create a unique, read-only barcode ID at the top of the form for you.
4. Type in the **Chemical Generic Molecule** name (e.g., *Paracetamol + Caffeine*).
5. Set your **Reorder Limit Threshold**. This is the safety number. If you type 50, the system will sound an alarm on your dashboard the moment your stock drops to 50 items or fewer.
6. If this medicine strictly requires a doctor's paper note, check the box that says **Requires Rx Script?**.
7. Click the blue **[CATALOGUE MEDICATION PRODUCT ROW]** button to save it.

### 3.2. How to Make a Sale (POS Register Desk)

To sell items to a walk-in customer, click on **POS Register Desk** in your left menu sidebar.

1. Click inside the search bar and type the name of the medicine, or simply click the blue **[DISPENSE]** button next to the medicine box on the screen.
2. The item will instantly appear in the **Current Customer Receipt** box on the right.
3. **Optional:** If the customer is a regular patient, use the search box inside the receipt area to find and link their profile.
4. **Prescription Check:** If you are selling a restricted medicine and the system flags it, you must select an approved doctor’s script from the top queue before you can finish the sale.
5. **Discounts:** If you want to give a discount, type the discount amount in the **Apply Discount (KES)** field at the bottom.

6. **Split Payments:** If the customer wants to pay half in cash and half via M-Pesa, check the box that says **Split Payment Between Modes** and type in the separate amounts.
7. Click **[FINALIZE TRANSACTION]** to print out your thermal shop receipt and automatically subtract those items from your shelves.

**3.3. Ending Your Shift (Reconciliation)**

At the very end of the working day, cashiers must click the black **[END OPERATIONAL SHIFT]** button at the top of the sales screen.

1. The system will securely lock the screen and calculate exactly how much money should be in the drawer from Cash, M-Pesa, and Card transactions.
2. The cashier counts the physical cash and digital mobile transactions by hand.
3. Type the actual numbers found into the matching text boxes.
4. If there is a shortage or an extra amount, type a short explanation note in the text area (e.g., *"Gave wrong change of 50 KES"*).
5. Click the final submit button to close out the business day.

**3.4. Checking In New Supplier Deliveries**

When a wholesale supplier drops off boxes of items at your pharmacy, go to **Inward Purchases** to add those new boxes to your active inventory shelves.

1. Choose your supplier from the **Acquisition Consignment Supplier Wholesaler** dropdown menu (e.g., *Bungoma Chemists*).
2. **Smart Shortcut:** If the system automatically drafted a purchase order for you when your stock was low, a bright orange button will pop up saying **[Load Staged Auto-PO]**. Click it to instantly fill out the items list for you!
3. For each medicine row item on your delivery note, fill in the exact physical **Batch Number** printed on the actual medicine packaging (e.g., *BNT-4402*).
4. Type in the **Quantity Received**, your **Unit Cost Price** (what you bought it for), and your **Retail Price** (what you will sell it for).
5. Select the **Expiration Timeline Date** from the calendar picker.
6. Double-check that the total amount at the bottom matches your supplier's physical paper invoice, then click **[INGEST INBOUND CONSIGNMENT PO]**.

---

**4. Customizing Your Shop Profile & Logo**

If you want to change your pharmacy's name, telephone hotline numbers, receipts footer text, or logo layout theme colors, your store manager can do this instantly:

1. Click on **Corporate Layout Settings** in the left sidebar menu under System Administration.
2. Change your legal entity shop name in the **Legal Entity Corporate/Company Name** field (e.g., *Orvella Pharmacy*).
3. To update your logo, click **[Choose Image File]**, select your new logo image from your computer files, and upload it.
4. Type your main support email address, phone helpline numbers, and physical street location into the text boxes.
5. On the right side of the screen, you will see a live preview canvas showing exactly how your thermal receipt slips will look when handed to a customer.
6. Click save to update every terminal screen instantly.

---

**5. Troubleshooting (Quick Troubleshooting Answers)**

- **Why is an item flashing red on the dashboard?**
  It has dropped below your preferred safe stock levels. Go to the **Low Stock Reorder Desk** or click **Inward Purchases** to check in a fresh shipment from your suppliers.
- **The system is showing an item as expired, but we still have boxes left. What do I do?**
  The system follows a strict rule: it stops cashiers from accidentally dispensing expired batches to patients. An authorized pharmacist must expand that item inside the inventory manager and log a manual adjustment to remove the expired box from active storage.
- **The receipt printer isn't printing the correct logo or text font.**
  Go to the **Corporate Settings Console**, click save on your details again to clear the cache memories, and ensure your system layout hex choices are formatted correctly.

**ORVELLA PHARMACY – COUNTER CHEAT SHEET**

**Daily Cashier Reference Guide (Print & Place at Counter)**

---

**1. STARTING & ENDING YOUR SHIFT**

- **Sign In:** Open the browser to http://127.0.0.1:8000, enter your assigned cashier email/password, and ensure the top menu displays your name.
- **Close Shift:** At the end of the working day, click the black **[END OPERATIONAL SHIFT]** button at the top of the screen.
- **Count & Reconcile:** Count all physical cash drawer money and digital transaction totals (M-Pesa/Card) by hand. Type the actual amounts into the matching fields, enter any notes for discrepancies, and click submit to lock the drawer.

---

**2. PROCESSING A STANDARD SALE (POS DESK)**

1. **Look Up Medicine:** Click the search bar at the top of the **POS Register Desk**. Type the medicine name or barcoded SKU code.
2. **Add to Receipt:** Click the blue **[DISPENSE]** button next to the medication card. The item will instantly fly into the right-hand **Current Customer Receipt** column.
3. **Adjust Quantities:** Change item counts or apply a discount in the **Apply Discount (KES)** box at the bottom if needed.
4. **Finalize & Print:** Click **[FINALIZE TRANSACTION]** to record the sale and automatically trigger the thermal receipt printout.

---

**3. HANDLING SPECIAL TRANSACTION CONDITIONS**

- **Linking a Regular Customer:** Before clicking finalize, click inside the **"Search patient registry to link profile..."** box on the receipt column. Search by customer name or telephone number to tie the sale to their file.
- **Doctor's Prescriptions (Rx Only Medicine):** If an item requires a prescription, a warning block will appear. Go to the **Pending Prescription Queue** bar at the very top of the desk page, click the matching doctor's order row to load it, and proceed to checkout.

- **Split Payments (Cash + Mobile Money):** If a customer wants to pay using two different modes, check the **[ ] SPLIT PAYMENT BETWEEN MODES** box. Type the specific amount paid under Cash, M-Pesa, or Card. The system will throw an error if the split sum does not match the exact total due.

---

**4. PATIENT REGISTRATION QUICK-STEPS**

If a patient wants to register a permanent file chart for chronic medicine tracking:

1. Go to **Patient Registry** in the left sidebar menu.
2. Look at the right-side form box labeled **Enroll Patient File**.
3. Type their **Full Name** and **Primary Telephone Contact** (+254...).
4. Leave the *Chart/Patient Reference Number* box **blank** to let the system automatically issue a sequential code (e.g., PAT-2026-0015).
5. Click the blue **[ENROLL PATIENT FILE]** button.

---

💡 **INSTANT TROUBLESHOOTING ACTIONS**

- **"Stock Deficit" Error:** You are trying to sell more units than are available in active, unexpired batches. Check your inventory console or alert the pharmacist.
- **Accidental Cart Mistake:** Click the small red trash bin or **[X]** icon next to any item inside the shopping basket grid to remove it before finalizing.
- **Receipt Reprinting:** If a printer jams, go to your sales history feed, locate the invoice code reference line, and click **[Reprint Invoice]**.
